## 1 Primitive Notions

Let there be *sets*.

Let there be a binary relation called *membership*,  $\in$ . When  $x \in y$  holds, we say  $x$  is a *member* or *element* of  $y$ . We write  $x \notin y$  iff  $x$  is not a member of  $y$ .

## 2 The Axioms

**Axiom 1** (Extensionality). *If two sets have exactly the same members, then they are equal.*

As a consequence of this axiom, we may identify a set  $A$  with the class  $\{x : x \in A\}$ . The use of the symbols  $\in$  and  $=$  is consistent.

**Definition 2.** We say that a class  $\mathbf{A}$  is a *set* iff there exists a set  $A$  such that  $A = \mathbf{A}$ . That is, the class  $\{x : P(x)\}$  is a set iff

$$\exists A. \forall x (x \in A \leftrightarrow P(x)) .$$

Otherwise,  $\mathbf{A}$  is a *proper class*.

**Definition 3** (Subset). If  $A$  is a set and  $\mathbf{B}$  is a class, we say  $A$  is a *subset* of  $\mathbf{B}$  iff  $A \subseteq \mathbf{B}$ .

**Axiom 4** (Empty Set). *The empty class is a set, called the empty set.*

**Axiom 5** (Pairing). *For any objects  $a$  and  $b$ , the class  $\{a, b\}$  is a set, called a pair set.*

**Definition 6** (Union). For any class of sets  $\mathbf{A}$ , the *union*  $\bigcup \mathbf{A}$  is the class  $\{x : \exists A \in \mathbf{A}. x \in A\}$ .

We write  $\bigcup_{P[x_1, \dots, x_n]} t[x_1, \dots, x_n]$  for  $\bigcup \{t[x_1, \dots, x_n] : P[x_1, \dots, x_n]\}$ .

**Proposition 7.** *If  $\mathbf{A} \subseteq \mathbf{B}$  then  $\bigcup \mathbf{A} \subseteq \bigcup \mathbf{B}$ .*

PROOF: Easy.  $\square$

**Axiom 8** (Union). *For any set  $A$ , the union  $\bigcup A$  is a set.*

**Proposition 9.** *For any sets  $A$  and  $B$ , the class  $A \cup B$  is a set.*

PROOF: It is  $\bigcup\{A, B\}$ .  $\square$

**Proposition Schema 10.** *For any objects  $a_1, \dots, a_n$ , the class  $\{a_1, \dots, a_n\}$  is a set.*

PROOF: By repeated application of the Pairing and Union axioms.  $\square$

**Definition 11** (Power Set). For any set  $A$ , the *power set* of  $A$ ,  $\mathcal{P}A$ , is the class of all subsets of  $A$ .

**Axiom 12** (Power Set). *For any set  $A$ , the class  $\mathcal{P}A$  is a set.*

**Axiom 13** (Subset, Aussonderung). *For any class  $\mathbf{A}$  and set  $B$ , if  $\mathbf{A} \subseteq B$  then  $\mathbf{A}$  is a set.*

**Proposition 14.** *For any set  $A$  and class  $\mathbf{B}$ , the intersection  $A \cap \mathbf{B}$  is a set.*

PROOF: By the Subset Axiom since it is a subclass of  $A$ .  $\square$

**Proposition 15.** *For any set  $A$  and class  $\mathbf{B}$ , the relative complement  $A - \mathbf{B}$  is a set.*

PROOF: By the Subset Axiom since it is a subclass of  $A$ .  $\square$

**Theorem 16.** *The universal class  $\mathbf{V}$  is a proper class.*

PROOF:

$\langle 1 \rangle 1$ . ASSUME:  $\mathbf{V}$  is a set.

$\langle 1 \rangle 2$ . LET:  $R = \{x : x \notin x\}$

$\langle 1 \rangle 3$ .  $R$  is a set.

PROOF: By the Subset Axiom.

$\langle 1 \rangle 4$ .  $R \in R$  if and only if  $R \notin R$

$\langle 1 \rangle 5$ . Q.E.D.

PROOF: This is a contradiction.

$\square$

**Definition 17** (Intersection). For any class of sets  $\mathbf{A}$ , the *intersection*  $\bigcap \mathbf{A}$  is the class  $\{x : \forall A \in \mathbf{A}. x \in A\}$ .

We write  $\bigcap_{P[x_1, \dots, x_n]} t[x_1, \dots, x_n]$  for  $\bigcap \{t[x_1, \dots, x_n] : P[x_1, \dots, x_n]\}$ .

**Proposition 18.** *For any nonempty class of sets  $\mathbf{A}$ , the class  $\bigcap \mathbf{A}$  is a set.*

PROOF: Pick  $A \in \mathbf{A}$ . Then  $\bigcap \mathbf{A} \subseteq A$ .  $\square$

**Proposition 19.** *If  $\mathbf{A} \subseteq \mathbf{B}$  then  $\bigcap \mathbf{B} \subseteq \bigcap \mathbf{A}$ .*

PROOF: Easy.  $\square$

**Proposition 20.** *For any set  $A$  and class of sets  $\mathbf{B}$ , we have*

$$A \cup \bigcap \mathbf{B} = \bigcap \{A \cup X \mid X \in \mathbf{B}\}$$

PROOF: Easy.  $\square$

**Proposition 21.** *For any set  $A$  and class of sets  $\mathbf{B}$ , we have*

$$A \cap \bigcup \mathbf{B} = \bigcup \{A \cap X \mid X \in \mathbf{B}\}$$

PROOF: Easy.  $\square$

**Proposition 22.** *For any set  $C$  and class of sets  $\mathbf{A}$ , we have*

$$C - \bigcup \mathbf{A} = \bigcap \{C - X \mid X \in \mathbf{A}\} .$$

PROOF: Easy.  $\square$

**Proposition 23.** *For any set  $C$  and class of sets  $\mathbf{A}$ , we have*

$$C - \bigcap \mathbf{A} = \bigcup \{C - X \mid X \in \mathbf{A}\} .$$

PROOF: Easy.  $\square$

### 3 Ordered Pairs

**Definition 24** (Ordered Pair). For any objects  $a$  and  $b$ , the *ordered pair*  $(a, b)$  is  $\{\{a\}, \{a, b\}\}$ . We call  $a$  its *first coordinate* and  $b$  its *second coordinate*.

**Theorem 25.** *For any objects  $(a, b)$ , we have  $(a, b) = (c, d)$  if and only if  $a = c$  and  $b = d$ .*

PROOF:

$\langle 1 \rangle 1$ . If  $(a, b) = (c, d)$  then  $a = c$  and  $b = d$

$\langle 2 \rangle 1$ . ASSUME:  $(a, b) = (c, d)$

$\langle 2 \rangle 2$ .  $a = c$

PROOF: Since  $\{a\} = \bigcap(a, b) = \bigcap(c, d) = \{c\}$ .

$\langle 2 \rangle 3$ .  $\{a, b\} = \{c, d\}$

PROOF:  $\{a, b\} = \bigcup(a, b) = \bigcup(c, d) = \{c, d\}$ .

$\langle 2 \rangle 4$ .  $b = c$  or  $b = d$

$\langle 2 \rangle 5$ . CASE:  $b = c$

$\langle 3 \rangle 1$ .  $a = b$

$\langle 3 \rangle 2$ .  $\{c, d\} = \{a\}$

$\langle 3 \rangle 3$ .  $b = d$

$\langle 2 \rangle 6$ . CASE:  $b = d$

PROOF: We have  $a = c$  and  $b = d$  as required.

$\langle 1 \rangle 2$ . If  $a = c$  and  $b = d$  then  $(a, b) = (c, d)$

PROOF: Trivial.

$\square$

**Definition 26** (Cartesian Product). The *Cartesian product* of classes  $\mathbf{A}$  and  $\mathbf{B}$  is the class

$$\mathbf{A} \times \mathbf{B} = \{(x, y) : x \in \mathbf{A}, y \in \mathbf{B}\} .$$

**Lemma 27.** *For any objects  $x$  and  $y$  and set  $C$ , if  $x \in C$  and  $y \in C$  then  $(x, y) \in \mathcal{PP}C$ .*

PROOF: Easy.  $\square$

**Corollary 27.1.** *For any sets  $A$  and  $B$ , the Cartesian product  $A \times B$  is a set.*

PROOF: By the Subset Axiom applied to  $\mathcal{PP}(A \cup B)$ .  $\square$

**Lemma 28.** *If  $(x, y) \in \mathbf{A}$  then  $x, y \in \bigcup \bigcup \mathbf{A}$ .*

PROOF: Easy.  $\square$

## 4 Relations

**Definition 29** (Relation). A *relation* is a class of ordered pairs. It is *small* iff it is a set.

When  $\mathbf{R}$  is a relation, we write  $x\mathbf{R}y$  for  $(x, y) \in \mathbf{R}$ .

**Definition 30** (Domain). The *domain* of a class  $\mathbf{R}$  is  $\text{dom } \mathbf{R} = \{x : \exists y.(x, y) \in \mathbf{R}\}$ .

**Definition 31** (Range). The *range* of a class  $\mathbf{R}$  is  $\text{ran } \mathbf{R} = \{y : \exists x.(x, y) \in \mathbf{R}\}$ .

**Definition 32** (Field). The *field* of a class  $\mathbf{R}$  is  $\text{fld } \mathbf{R} = \text{dom } \mathbf{R} \cup \text{ran } \mathbf{R}$ .

**Proposition 33.** *If  $R$  is a set then  $\text{dom } R$ ,  $\text{ran } R$  and  $\text{fld } R$  are sets.*

PROOF: Apply the Subset Axiom to  $\bigcup \bigcup R$ .  $\square$
