1 Primitive Notions

Let there be *sets*.

Let there be a binary relation called *membership*, $\in$. When $x \in y$ holds, we say x is a *member* or *element* of y. We write $x \notin y$ iff x is not a member of y.

2 The Axioms

Axiom 1 (Extensionality)**.** *If two sets have exactly the same members, then they are equal.*

As a consequence of this axiom, we may identify a set A with the class $\{x : x \in A\}$. The use of the symbols $\in$ and $=$ is consistent.

Definition 2. We say that a class $\mathbf{A}$ *is a set* iff there exists a set A such that $A = \mathbf{A}$. That is, the class $\{x : P(x)\}$ is a set iff

$$\exists A. \forall x (x \in A \leftrightarrow P(x)) \ .$$

Otherwise, $\mathbf{A}$ is a *proper class.*

Definition 3 (Subset)**.** If A is a set and $\mathbf{B}$ is a class, we say A is a *subset* of $\mathbf{B}$ iff $A \subseteq \mathbf{B}$.

Axiom 4 (Empty Set)**.** *The empty class is a set, called the* empty set*.*

Axiom 5 (Pairing)**.** *For any objects a and b, the class $\{a, b\}$ is a set, called a* pair set*.*

Definition 6 (Union)**.** For any class of sets $\mathbf{A}$, the *union* $\bigcup \mathbf{A}$ is the class $\{x : \exists A \in \mathbf{A}. x \in A\}$.

We write $\bigcup_{P[x_1,\ldots,x_n]} t[x_1, \ldots, x_n]$ for $\bigcup \{t[x_1, \ldots, x_n] : P[x_1, \ldots, x_n]\}$.

Proposition 7. *If $\mathbf{A} \subseteq \mathbf{B}$ then $\bigcup \mathbf{A} \subseteq \bigcup \mathbf{B}$.*

Proof: Easy. $\square$

Axiom 8 (Union)**.** *For any set A, the union $\bigcup A$ is a set.*

Proposition 9. *For any sets A and B, the class $A \cup B$ is a set.*

PROOF: It is $\bigcup\{A, B\}$. $\square$

PROOF: By repeated application of the Pairing and Union axioms. $\square$

Definition 11 (Power Set)**.** For any set A, the *power set* of A, $\mathcal{P}A$, is the class of all subsets of A.

Axiom 12 (Power Set)**.** *For any set A, the class $\mathcal{P}A$ is a set.*

Axiom 13 (Subset, Aussonderung)**.** *For any class $\mathbf{A}$ and set B, if $\mathbf{A} \subseteq B$ then $\mathbf{A}$ is a set.*

Proposition 14. *For any set A and class $\mathbf{B}$, the intersection $A \cap \mathbf{B}$ is a set.*

PROOF: By the Subset Axiom since it is a subclass of A. $\square$

Proposition 15. *For any set A and class $\mathbf{B}$, the relative complement $A - \mathbf{B}$ is a set.*

$\langle 1 \rangle 3$. R is a set.
  PROOF: By the Subset Axiom.
$\langle 1 \rangle 4$. $R \in R$ if and only if $R \notin R$
$\langle 1 \rangle 5$. Q.E.D.
  PROOF: This is a contradiction.
$\square$

Definition 17 (Intersection)**.** For any class of sets $\mathbf{A}$, the *intersection* $\bigcap \mathbf{A}$ is the class $\{x : \forall A \in \mathbf{A}. x \in A\}$.

We write $\bigcap_{P[x_1,\ldots,x_n]} t[x_1, \ldots, x_n]$ for $\bigcap\{t[x_1, \ldots, x_n] : P[x_1, \ldots, x_n]\}$.

Definition 91 (Strictly Monotone Functions)**.** Let A and B be linearly ordered sets. A function $f : A \to B$ is *strictly monotone* iff, for all $x, y \in A$, if $x < y$ then $f(x) < f(y)$.

Theorem 92. *Let A and B be linearly ordered sets and $f : A \to B$ be strictly monotone. For all $x, y \in A$, if $f(x) < f(y)$ then $x < y$.*

Proof: We have $f(x) \neq f(y)$ and $f(y) \not< f(x)$ by trichotomy, hence $x \neq y$ and $y \not< x$ since f is strictly monotone, hence $x < y$ by trichotomy. □

⟨3⟩5. $|(A_0 \times D) \cup (D \times A_0) \cup (D \times D)| = \lambda$

Proof:

$$\begin{aligned} |(A_0 \times D) \cup (D \times A_0) \cup (D \times D)| &= \lambda \cdot \lambda + \lambda \cdot \lambda + \lambda \cdot \lambda \\ &= \lambda + \lambda + \lambda && (\langle 1 \rangle 10) \\ &= 3 \cdot \lambda \\ &\leq \lambda \cdot \lambda \\ &= \lambda && (\langle 1 \rangle 10) \end{aligned}$$

⟨3⟩6. Pick a bijection $g : (A_0 \times D) \cup (D \times A_0) \cup (D \times D) \approx D$

⟨3⟩7. $f_0 \cup g : (A_0 \cup D) \times (A_0 \cup D) \approx A_0 \cup D$

⟨3⟩8. Q.E.D.

Proof: This contradicts the maximality of f_0.

⟨2⟩2. $\lambda = \kappa$

Proof:

$$\begin{aligned} \kappa &= |B| \\ &= |A_0| + |B - A_0| \\ &\leq \lambda + \lambda \\ &= 2 \cdot \lambda \\ &\leq \lambda \cdot \lambda \\ &= \lambda \\ &\leq \kappa \end{aligned}$$

Corollary 198.1 (Absorption Law of Cardinal Arithmetic (Choice))**.** *Let κ and λ be cardinal numbers, the larger of which is infinite and the smaller of which is nonzero. Then*

$$\kappa + \lambda = \kappa \cdot \lambda = \max(\kappa, \lambda) \ .$$

Proof:

⟨1⟩1. Assume: w.l.o.g. $\kappa \leq \lambda$

$\langle 1 \rangle 2.$ $\kappa + \lambda = \lambda$

PROOF:

$$\begin{aligned}\lambda &\leq \kappa + \lambda \\ &\leq \lambda + \lambda \\ &= 2 \cdot \lambda \\ &\leq \lambda \cdot \lambda \\ &= \lambda\end{aligned}$$

$\langle 1 \rangle 3.$ $\kappa \cdot \lambda = \lambda$

PROOF:

$$\begin{aligned}\lambda &= 1 \cdot \lambda \\ &\leq \kappa \cdot \lambda \\ &\leq \lambda \cdot \lambda \\ &= \lambda\end{aligned}$$
